Problem Statement

In today's digitized financial ecosystem, millions of Indians — especially seniors and young adults — are left behind due to barriers in access, understanding, and usability of financial tools.

Digital Literacy gap

Many lack skills to use digital banking and investment tools.

Digital & Informational Barriers

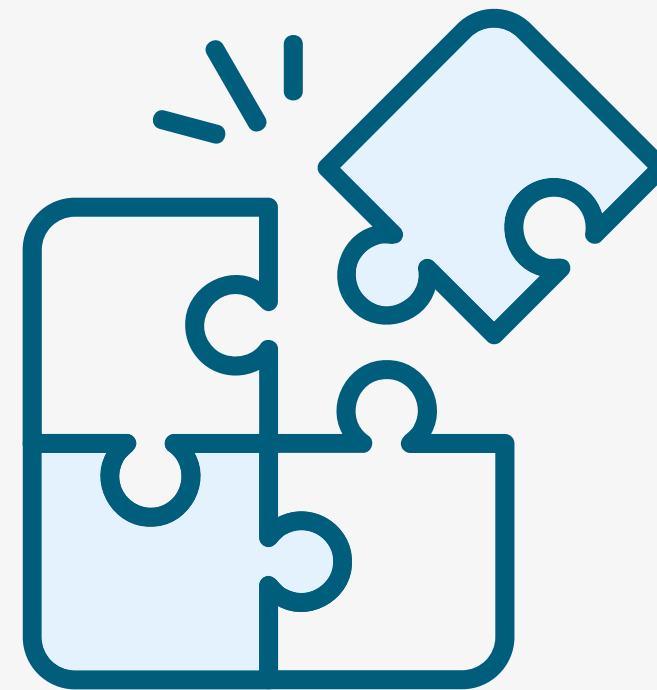

Complex Finance Information

Policies, schemes, and loans are hard to understand

Fragmented Information

Scattered platforms make it time-consuming to gather info.

Lack of Personalization

Generic advice doesn't suit individual needs.

Limited Financial Literacy

Basic concepts of budgeting and saving are missing

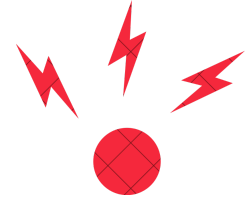

Human-Centric Barriers

Limited Accessibility

Platforms are often not senior-friendly or inclusive of language barriers

Pain Points and Impact

Key Pain Points

Survey

From the Fintech and Digital Banking 2025 Asia Pacific

Insights	Implication
30% increase in spending on analytics and AI/ML technologies is expected as banks build recommendations, reduce risk, and advise their business.	Banks are investing heavily in AI/ML to drive smarter, data-backed decision-making and improve operational efficiency.
70% year-on-year growth in mobile transactions is expected.	The surge in mobile usage will push banks to optimize their digital offerings for seamless mobile experiences
60% of banks in India admit to the struggle in offering intuitive, relevant, and personalized content through newly-launched digital channels.	There is a strong opportunity for banks to adopt modern, modular architecture that enables integration with third-party services and faster innovation.
As digital transactions grow at an exponential rate, banking-tech partnerships will build emphasis on mobile platforms to design innovative and personalized customer journeys	The rise of a “super app” will centralize financial services and elevate the customer experience through personalized, digital-first offerings

Is it important that the bank knows you for personalised services?

Source: Digital Banking Consumer Survey 2020

- **39%** of respondents want the most relevant services shown to their needs
- **23.8%** want more relevant offers
- **24.3%** want more attention.
- **78%** of respondents believe it is important for the bank to know them for personalized services.

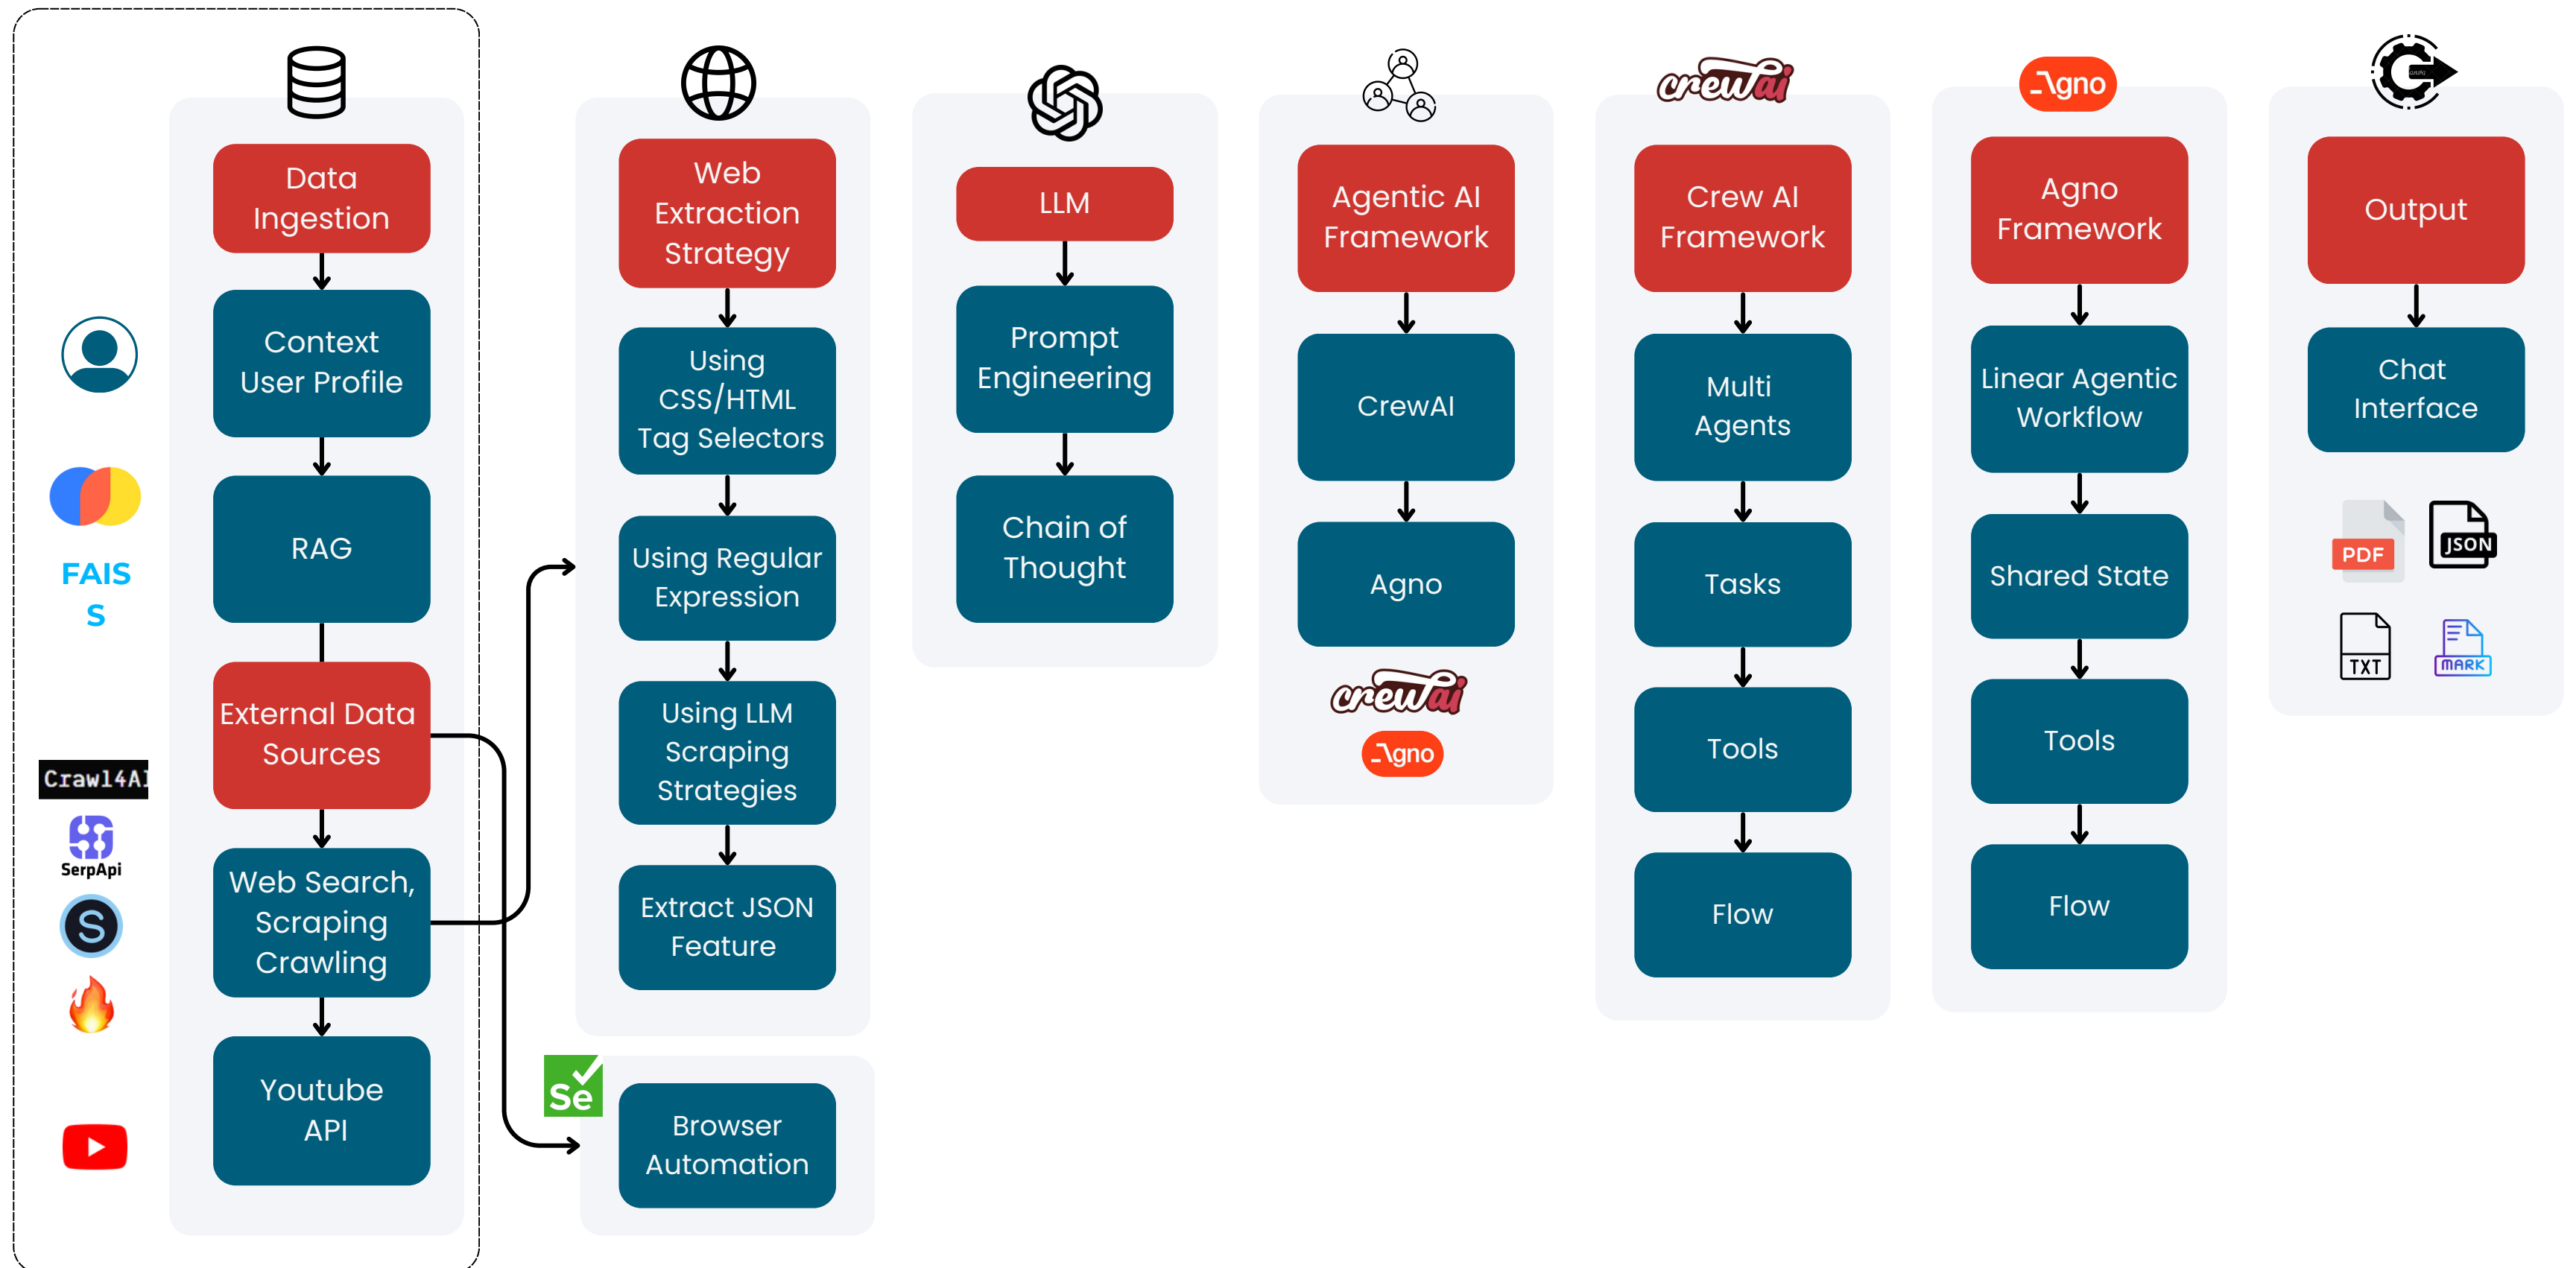

This indicates a strong demand for personalized services.

Market Comparison

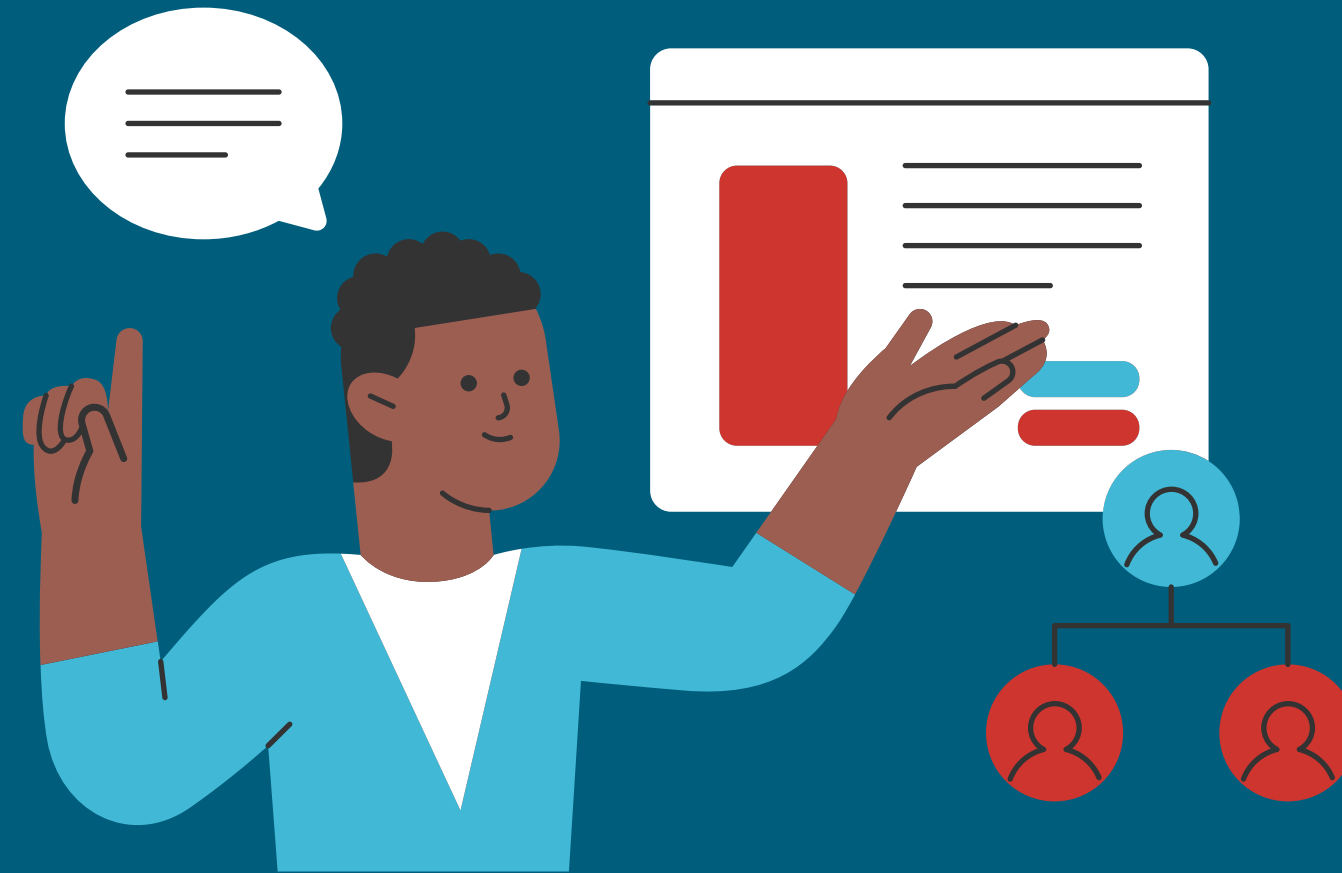

Platform	Pros	Cons
	• Traditional AI/ML based financial insights • Provides an optimized debt repayment strategy • Offers guidance on improving credit scores	• Lacks manual budgeting tools, it relies heavily on automated decision-making and limited customization • Limited personalization due to traditional AI-only approach
	• Generative-AI driven insights based on user behavior • Help users optimize their expenses and savings • Offers financial coaching for better money management	• Lacks policy advisory services despite offering comprehensive financial guidance
	• Traditional financial planning tool for long-term goals • Strong retirement planning and tax optimization features • Helps with estate and inheritance planning	• Only suitable for users specifically interested in retirement planning • Does not leverage Gen-AI for personalized insights
	• Gamifies financial literacy, making it engaging for users in an engaging manner • Real-time spend analysis and savings suggestions • Features an engaging and humorous AI chatbot interface, making financial management more approachable	• Limited wealth management tools • Lacks dynamic generation of new lesson content in a click • The app does not support international regions

None of the above apps are tailored to Indian population

User Personas and story

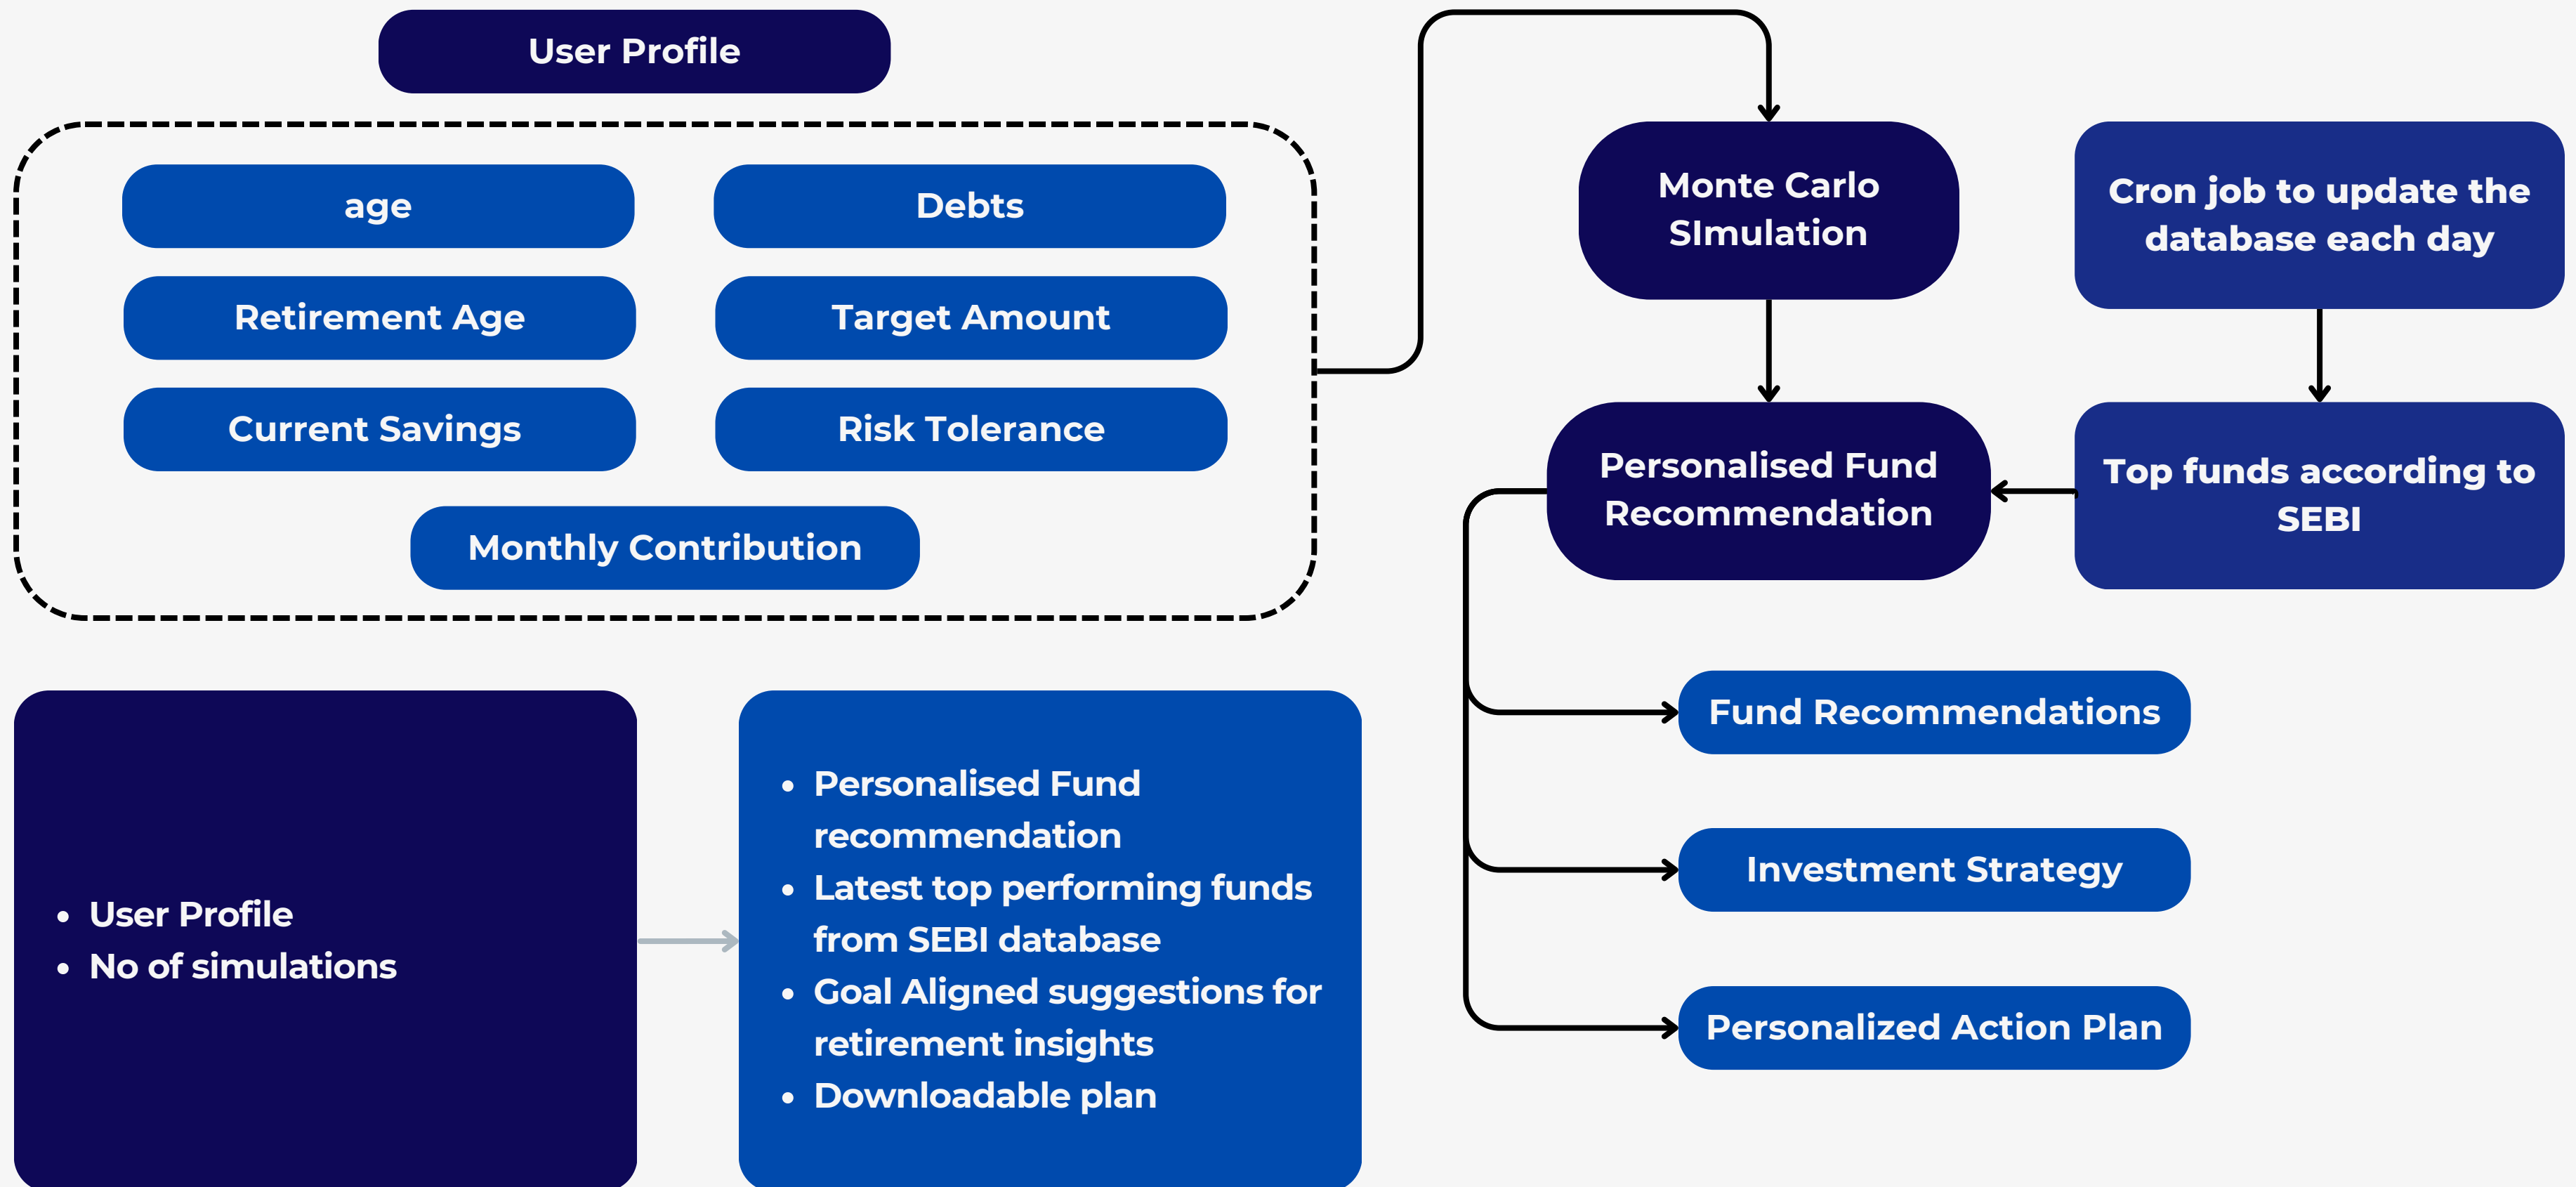

Framework for Financial Coach

Framework for the Retirement Planner

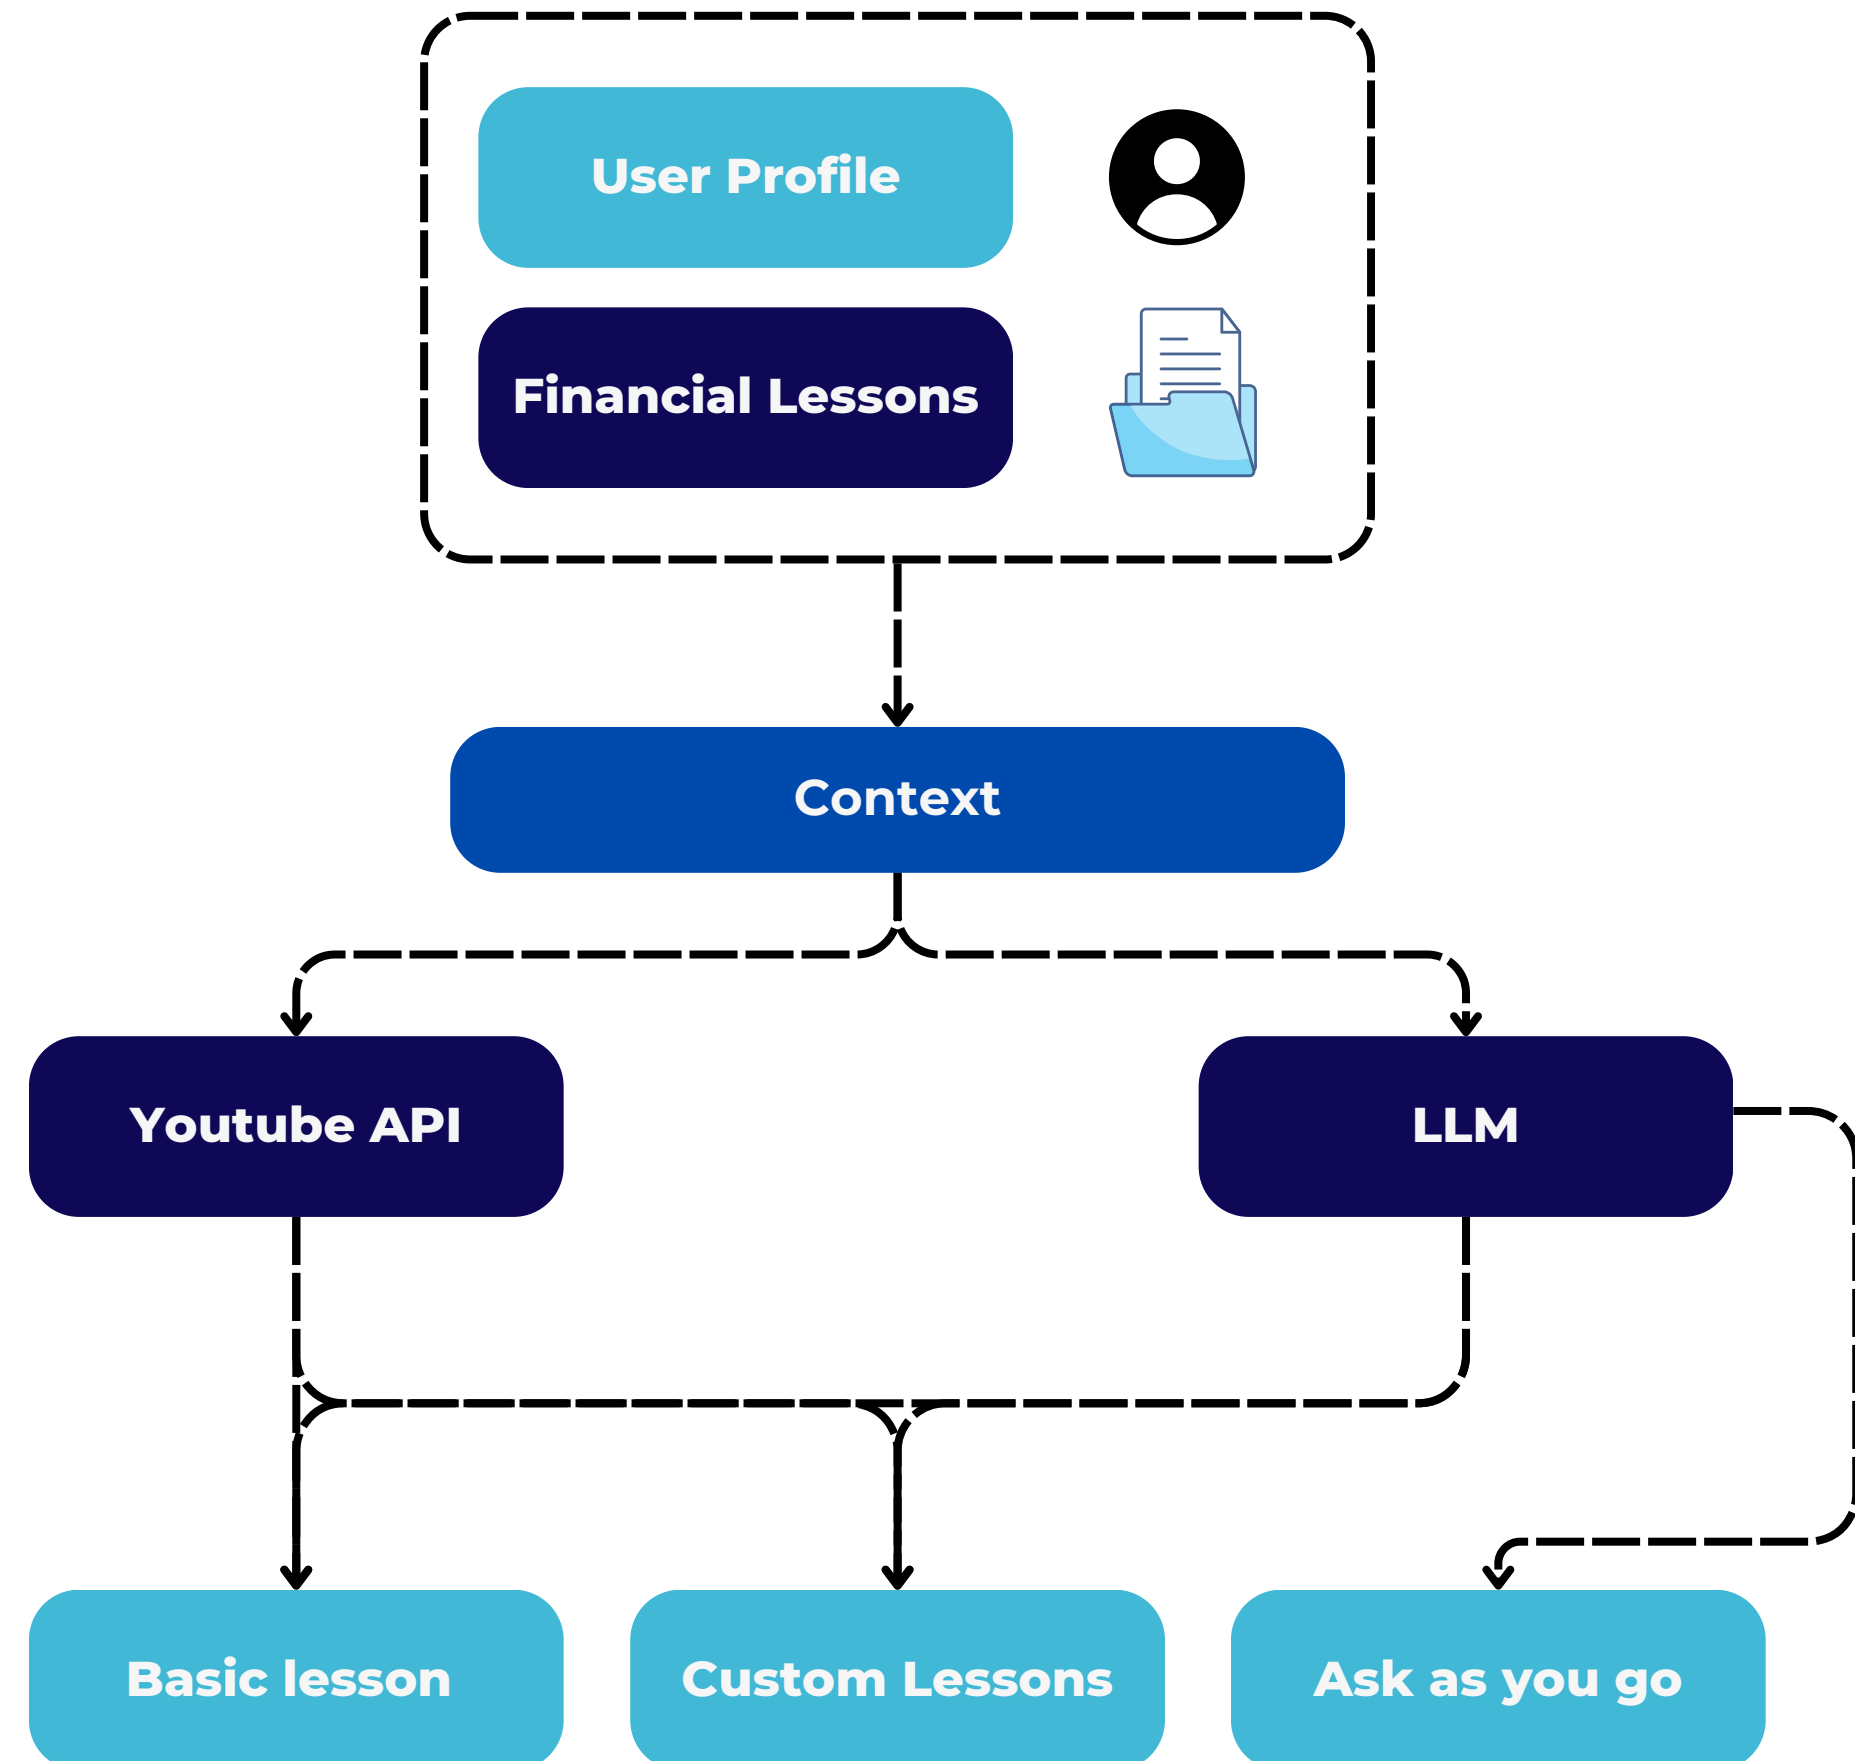

Framework for the Retirement Planner

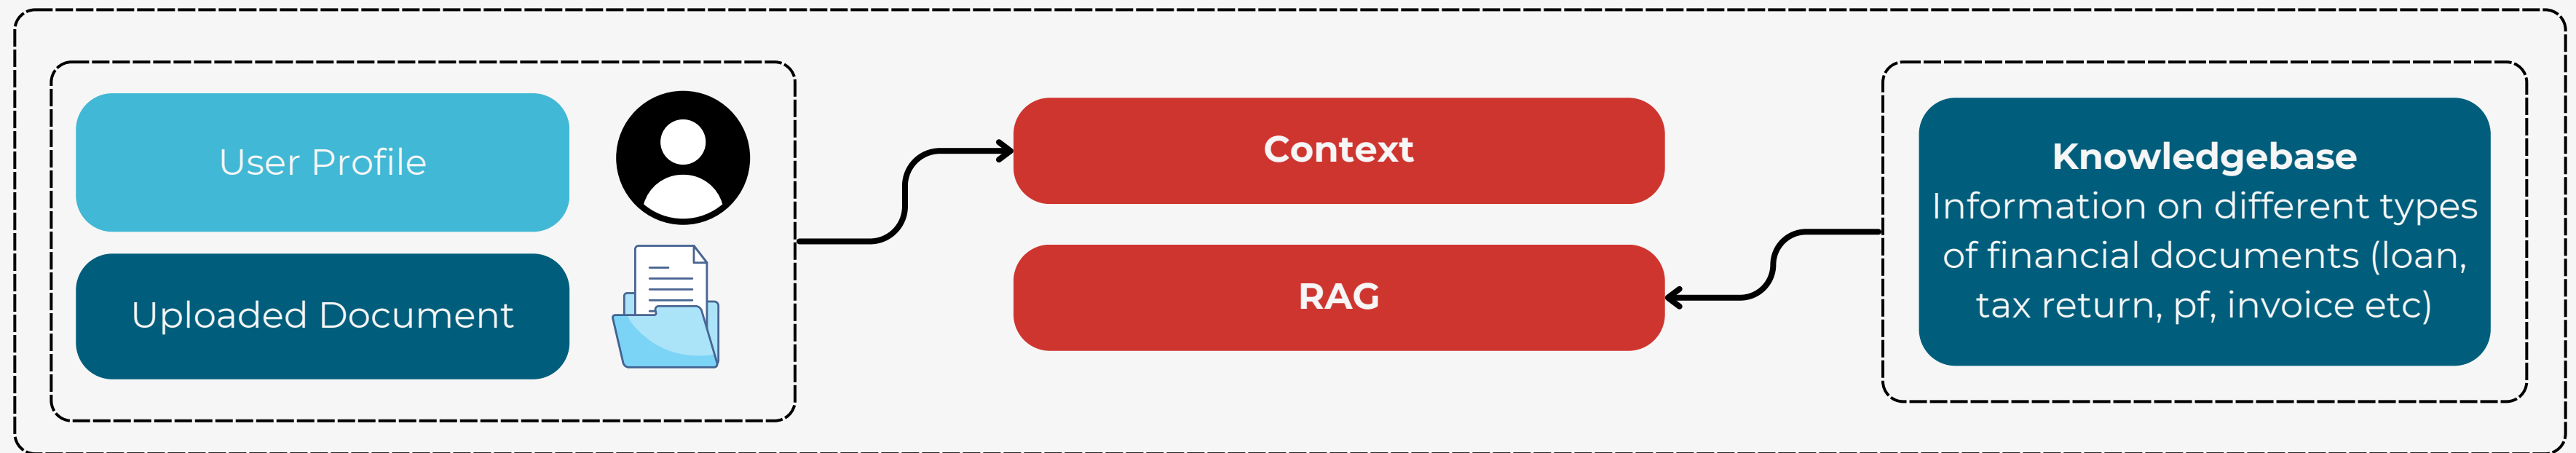

Framework for Financial Lessons

- Basic lesson plans for all – Jumpstart learning with ready-made content.
- Custom lessons on any topic – Users can generate lessons based on their interests.
- Smart video integration – YouTube API pulls in relevant videos to enhance learning.
- Instant doubt resolution – Built-in chatbot answers queries on the spot.

Document Simplification Engine

Input

- User queries and questions
- User profile
- Uploaded finance-related documents
- Previous conversation history

Output

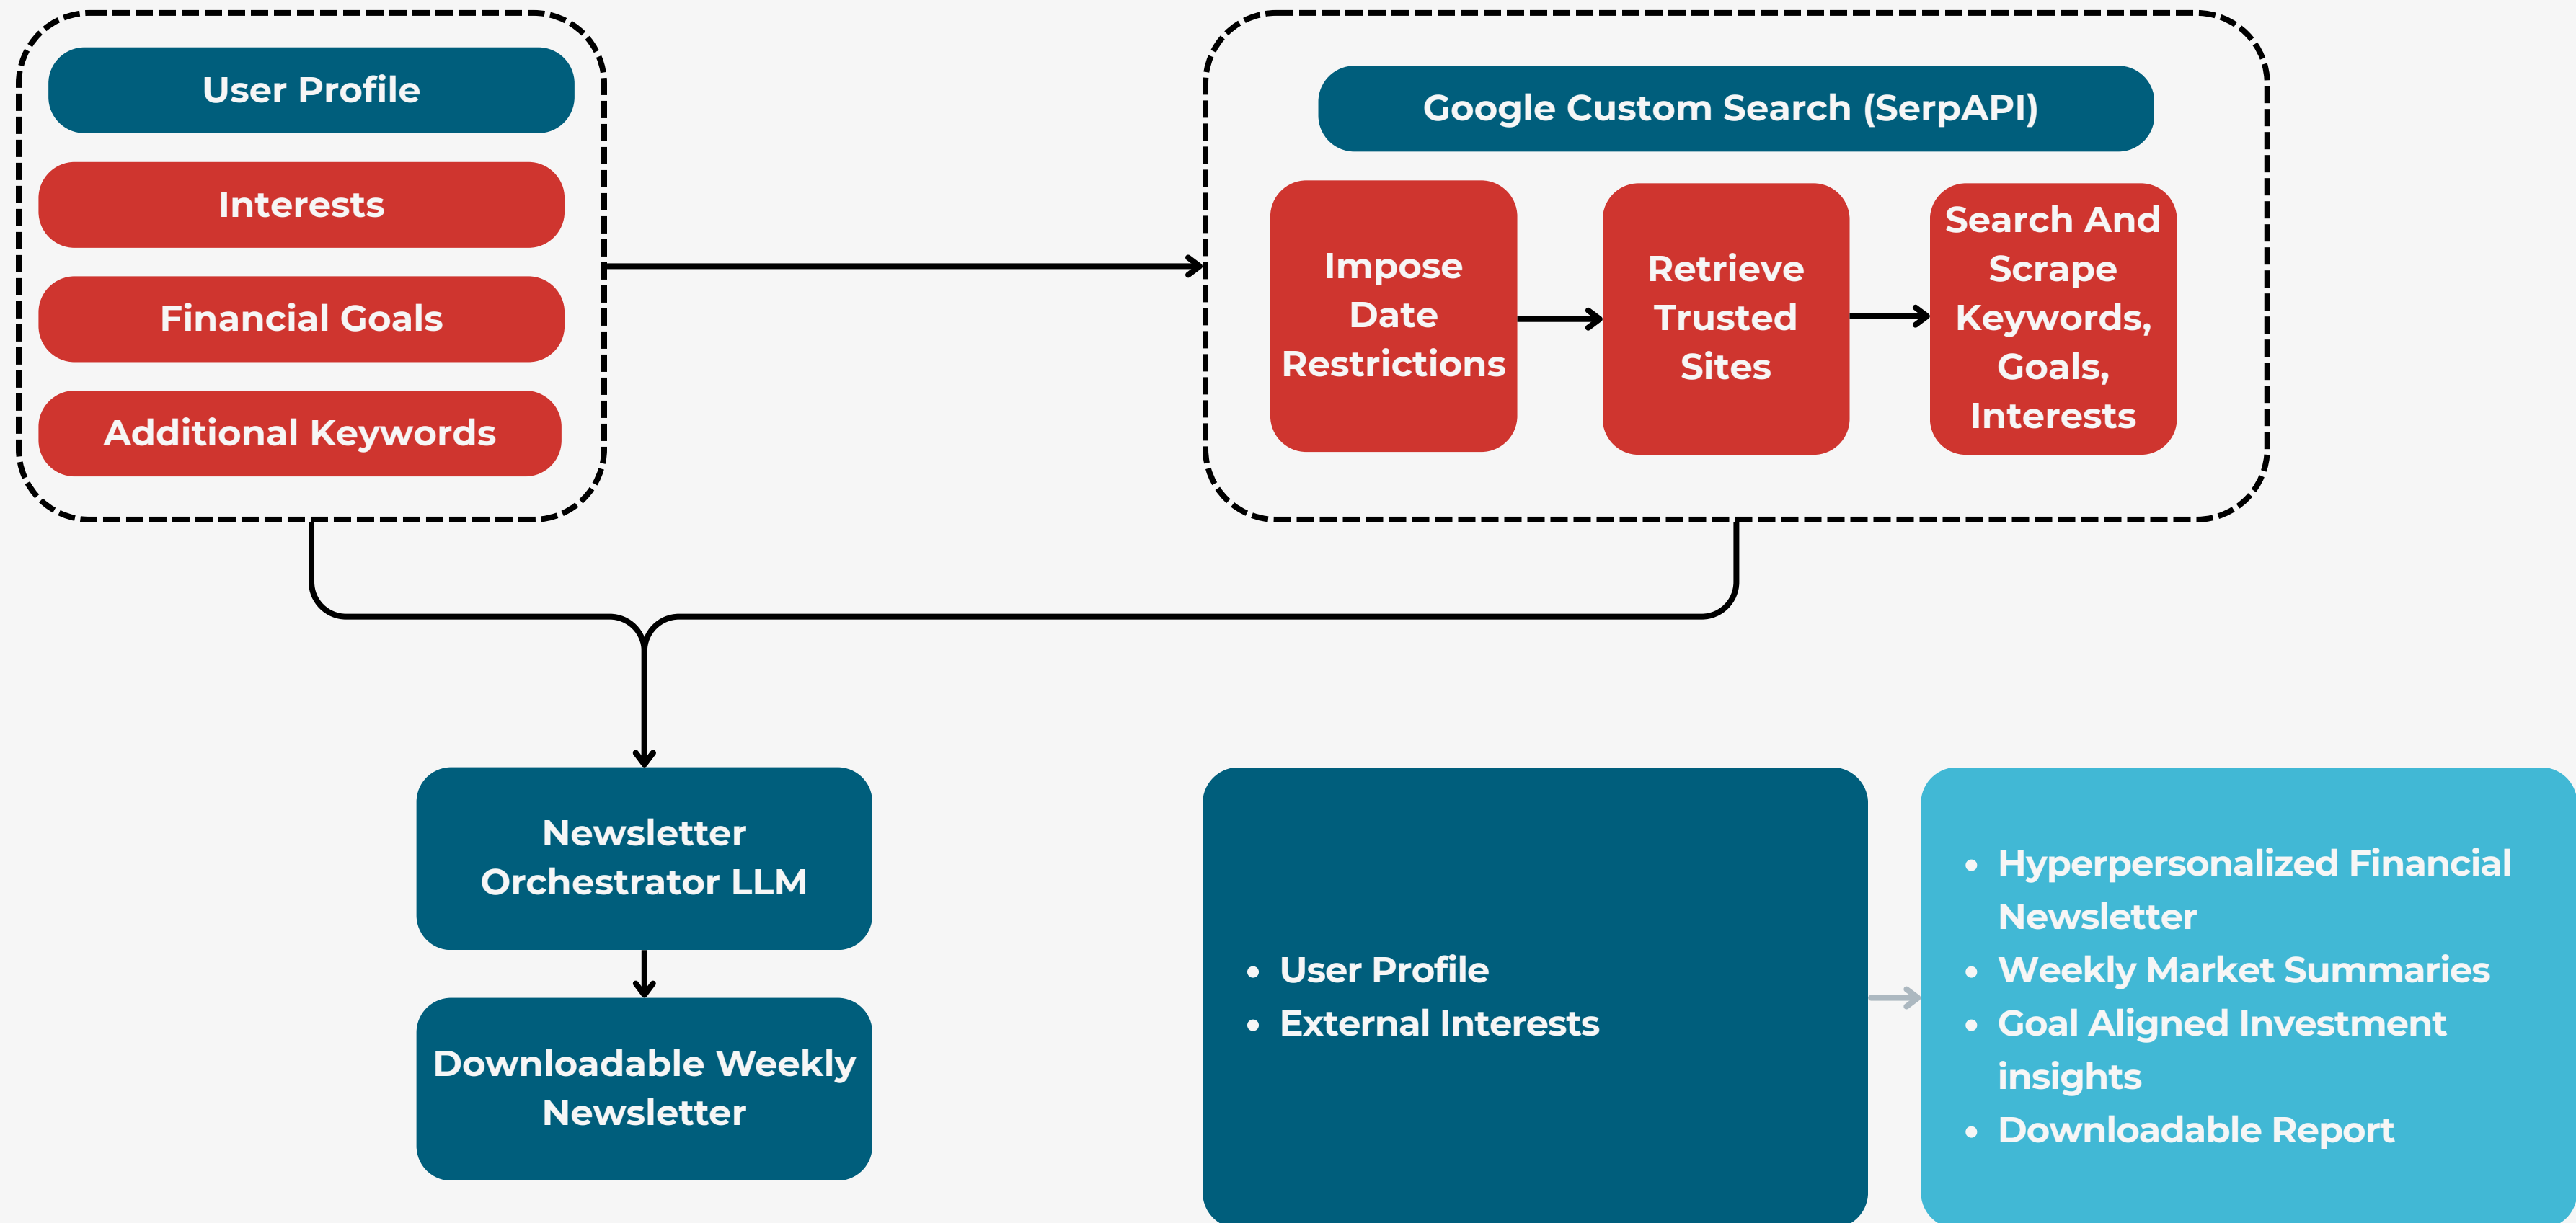

- Personalized and simplified explanations on complex finance terms
- Sources of Information
- Detailed breakdown of important terms and concepts
- Assists user with a chatbot for further questions

Simplified Document / Output

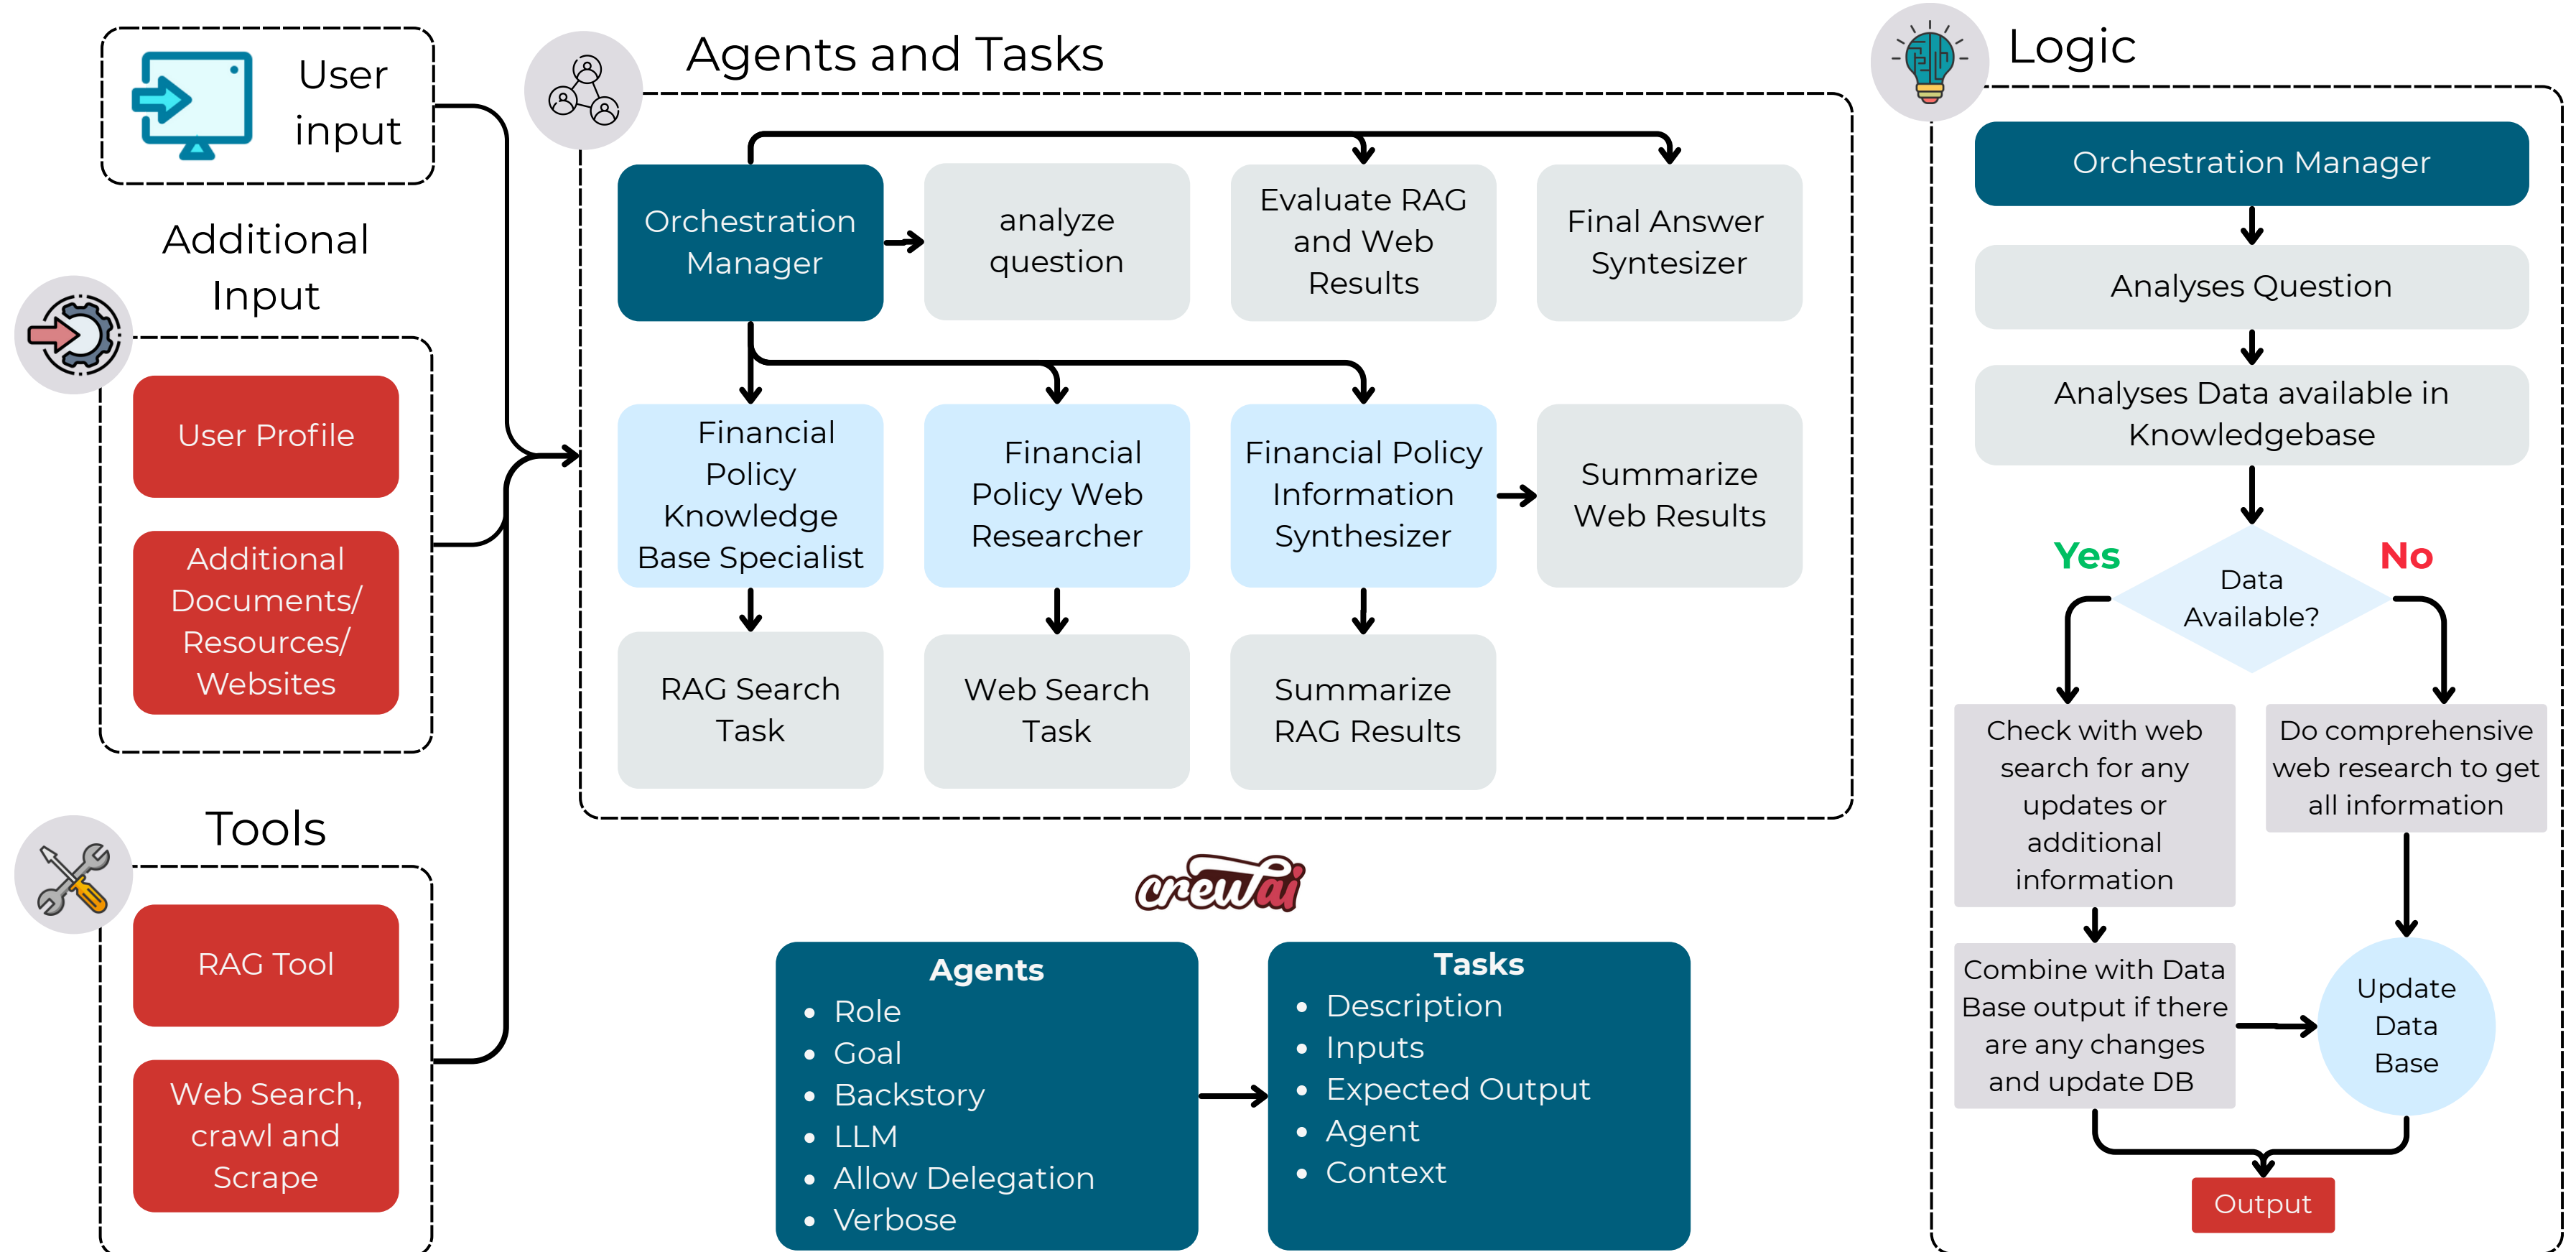

RAG- User document

Chatbot for further assistance

Cost and Scaling

OpenAI GPT-4o API

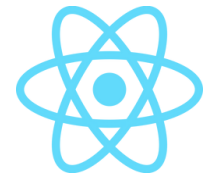

* Pay as you go pricing

Service	Hourly	Monthly (Est.)	Features
Amazon EKS (Elastic Kubernetes Service)	\$0.10 / cluster	~\$72.00	Scalable compute resources for running applications (based on 1 cluster, 24/7 usage)
MongoDB (Atlas) Service	\$0.08 / hr	~\$57.60	Managed NoSQL database (based on continuous usage)
Firebase (Authentication)	Free Tier available	\$0 (for limited usage)	Email/password authentication, basic usage is generally free under Firebase limits

Deployment Stack

Frontend

React: Dynamic User Interface Components

Tailwind: for a clean & professional UI

Chart.js: Display Analytics

Backend

FastAPI: Lightweight API framework ideal for real-time processing

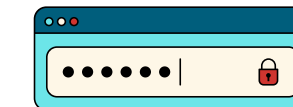

OpenAI: For chatbots, summaries, and smart insights

Database

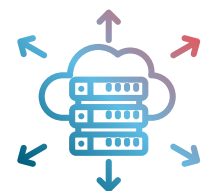

MongoDb: store user data, generated reports, and other user preferences

Authentication

Firebase: Secure and scalable solution for email/password and third-party logins

Infrastructure, Cloud and DevOps

Docker: Containerize the frontend, backend, and any auxiliary services

Kubernetes: (with Helm) for orchestration and scaling

Observability and Monitoring

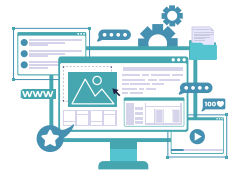

Prometheus : Monitoring and Alerting Toolkit

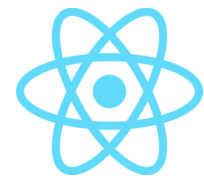

Grafana: Observability Platform
